According to Turabian format, the title page, table of contents page, and introduction page must all have different page numbers. In order to accomplish this, you must create section breaks between the opening three pages.

**STEP 1: CREATE SECTION BREAKS**

A) Place the cursor directly before the first word on your introduction page.

B) Then, under the “Page Layout” tab, access the drop-down menu by clicking “Breaks”.

C) From the drop-down menu, go down to “Section Breaks” and select “Next Page”.

D) Repeat these actions twice so a total of three section breaks have been inserted. After this is complete, there should be three blank pages at the beginning of your document. The first page will be the title page, the second will be a blank page, and the third will be the table of contents page.

**STEP 2: UNLINK THE SECTIONS**

A) Scroll to the second blank page and double click into the header section of the paper (top 1 inch of the page) so the header information appears in blue boxes.

B) Once the header information appears, click the “Link to Previous” button that is highlighted in yellow inside the toolbar at the top of the document. This will deselect the option and unlink the sections. Once this is complete the “Same as Previous” blue box on the right should disappear.
C) Then, scroll down to the bottom of the second blank page and click into the footer. Once again, there will be two blue boxes and the “Link to Previous” button in the toolbar will be highlighted in yellow. Click the “Link to Previous” button to deselect it and unlink the sections. Again, the “Same as Previous” blue box on the right will disappear.

D) Repeat actions A-C on the third blank page (Table of Contents page) as well as the first page of your actual paper (Introduction page). Before unlinking the header on the Introduction page, make sure the “Different First Page” check box is unchecked.

**STEP 3: INSERT PAGE NUMBERS**

A) After the sections are unlinked, scroll back to the third blank page (Table of Contents page) and double click into the footer. Then, go up to the toolbar and click on the “Insert” tab (third tab from the left).

B) Once the “Insert” tab is open, click on the “Page Number” button in order to open the drop-down menu. From the drop-down menu click “Format page Numbers...”.

C) After clicking “Format Page Numbers...” a pop-up box will appear. From the “Number Format” drop-down menu select the lower case roman numerals “i, ii, iii, ...”. Then make sure the “Start at:" under “Page numbering” is set to “iii”. Finally, press “OK” at the bottom of the pop-up box.

D) Then, click the “Page Number” button in the toolbar again, but this time select “Bottom of Page” and then “Plain Number 2”. After this, the number “iii” should appear in the middle of page 3’s footer (as seen below), but it should not appear in the footer of any other pages.
E) Actions very similar to A-D must now be completed on the fourth page (Introduction page). First, scroll down to page four and click into the header, not the footer.

F) Next, go to the "Insert" tab, open the drop-down menu under "Page Number" and select "Format Page Numbers...".

G) When the pop-up box opens, make sure the "Number format" is set to “1, 2, 3, ...” and the "Start at:" is set to “1”. Once this is correct, press “OK”.

H) Then, click the “Page Number” button in the toolbar again, but this time select “Top of Page” and then “Plain Number 3”. After this, the number “1” should appear in the top left of page 4’s header (as seen below). Subsequent numbers should appear in the top left of all following page numbers.

STEP 4: DOUBLE CHECK PAGE NUMBERS

A) After all other steps are completed, make sure there are no page numbers on the first two blank pages, the number “iii” is centered in page 3’s footer, the number “1” is in the top left of page 4’s header, and every page after 4 has the correct number in the top left of the header.
